

PRESENTING

A Gem of a

PERFORMER

Gemini

Cut-Off Wheels

- 20-30% longer life and greater cut-rate than comparable products - indigenous or imported.
- Free cutting - Less physical efforts on swing arm, push through and stationary chop saw machines.
- Versatile - Grinds a range of alloy, carbon and construction steels equally well.

NORTON

A Gem of a Performer at a mini price

GRINDWELL
NORTON LTD.

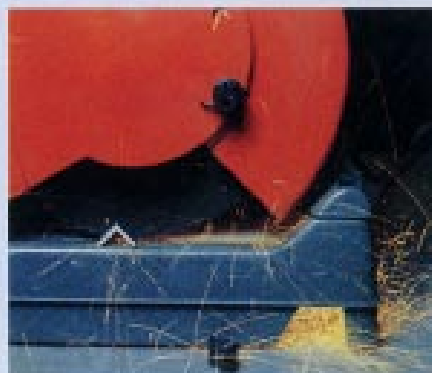

For Versatile Cost-cutting Performance

As a result of economic liberalisation in recent years, there has been a remarkable increase in imported chop-saw machines in India. However, a customer remains baffled about selecting the right cut-off wheel for his application from the plethora of imported and local brands. Because when it comes to choosing the right cut-off wheel, besides price, other aspects like safety, consistent quality, guaranteed performance and reliability play an equally important role.

Norton has always been committed to provide cost-effective solutions to its customers, increasing their productivity and lowering total grinding costs. Though the existing products are still unmatched, Norton relentlessly works on upgrading its products to suit the emerging market needs.

Presenting Gemini - A Gem of Performer at a mini price

After the successful introduction of the economically-priced Gemini Depressed Centre Discs recently, Norton is now proud to offer a new range of Gemini Cut-off Wheels.

Produced in a dedicated facility with state-of-the-art equipment, the Gemini Cut-off wheel is indeed an innovative product that adds value to the user. If you are looking for a quality product at an economical price per wheel, Gemini Cut-off wheel should be your obvious choice. A cursory glance at Gemini's features is enough to convince you that it is the best value for your money.

Gemini - A Cut-off Wheel for quality, performance and economy

Gemini Cut-off wheels combine the proven performance and economy of the versatile Aluminium Oxide abrasive grains with the latest wheel design and a new superior bonding technology from Norton Co.

Born to live longer

Gemini Cut-off wheels have been specially engineered to give an increased wheel life and high cut-rate. Numerous field and in-house tests have proved that Gemini Cut-off wheels offer 20-30% longer life and a greater cut-rate than comparable products - indigenous or imported - without compromising on safety.

Easier, effortless cutting

Available in 300, 350 and 400 mm diameters and in a minimum 2.5 mm thickness, Gemini Cut-off wheels make more power available per unit of thickness. Thus, with the same horsepower machine, thinner cut-off wheels have a higher horsepower of machine available per mm thickness of the wheel, making them an ideal choice for light-weight low power compact chop-saw machines. This makes grinding easier and effortless, thereby virtually taking away the fatigue from the operation.

Versatile

Gemini Cut-off wheels are ideal for use in foundries, fabrication shops and general-purpose machine shops for virtually any metal working application where free cut and durability are desired. They are versatile enough to cut different materials - from alloy steel and carbon steel to construction grade steels - with high efficiency.

Availability

Gemini Cut-off wheels are easily available at Grindwell Norton dealers and stockists throughout the country.

Gemini Cut-off Wheels

FEATURES

- Longer life
- Faster Cut-Rate
- Free cutting
- Cool cutting
- Extra rigidity

BENEFITS

- More cuts than any comparable product. Fewer wheel changes, less down-time and lowest cost per cut.
- Greater efficiency on all HP applications.
- Requires less physical effort on swing arm, push through and stationary chop-saw machines
- Reduces heat-cracking and other metallurgical damage.
- Minimizes deflection. Allows cuts close to vertical.
