BUFFING ROLLS

**FOR SUPERIOR
SCRATCH-FREE FINISH**

NORTON

GRINDWELL NORTON LTD.

BUFFING ROLLS FOR LEATHER FINISHING

Grindwell made the first grinding wheel in India, in 1941. And since then has been meeting the needs of the Indian industry with world-class abrasive products.

Grindwell Norton is an affiliate of Norton Co., USA, a Fortune 500 corporate giant and world number one in abrasives and abrasive products. Today, with 6 manufacturing plants at 3 locations, 22 field offices and over 1500 outlets all over India, Grindwell Norton is India's largest manufacturer of abrasives.

COATED ABRASIVES

With the new most modern coated abrasives manufacturing plant at Bangalore, built to Norton's international standards, Grindwell Norton offers the full range of world-class coated abrasive products in India. This state-of-the-art plant consists of full width large capacity coating machines equipped with precision control systems to produce high quality, uniform and consistent products. Alkon, Zirkon and Silkon are some of the well-known brands offered by Grindwell Norton.

PRODUCTS FOR THE LEATHER INDUSTRY

Grindwell Norton also offers the full range of abrasive products for leather industry, right from raw hide processing stage to final product.

Grindwell Norton now offers Aluminium Oxide Paper Rolls - Alkon H221 in addition to Silicon Carbide Paper Rolls- Silkon G402/G403, for leather buffing.

H221 ALKON PAPER ROLLS

- ▲ H221 uses imported Aluminium Oxide abrasive grains. Blocky Aluminium Oxide grains do not 'scratch' the leather during buffing.
- ▲ The superior bond system used in H221 ensures that the roll does not get 'loaded' and buffs longer, giving you more output per piece of roll.
- ▲ H221 uses an imported paper for backing which gives superior strength to the product. This prevents tearing of the roll and hence can buff for longer period.
- ▲ H221 rolls are ideal for 'snuffing' (grain side finishing) and 'Nubuck' finish. It can also be used for 'Suede' finish to give better sheen to the skin.
- ▲ H221 rolls are available in the grit range of 180 to 1000.

G402/G403 SILKON PAPER ROLLS

- ▲ G402/G403 rolls use closely graded superior quality Silicon Carbide abrasive grains. These sharp grains provide uniform short 'naps' in Suede finish.
- ▲ The 'soft' bond system used in G402/G403 ensures that the sharp Silicon Carbide grains do not scratch the leather while cutting the fibres.
- ▲ G402/G403 rolls use an imported paper for backing which gives superior strength to the product. This prevents tearing of the roll and hence can buff for longer period.
- ▲ G402/G403 rolls are available in the grit range of 80 to 1000.
